

The Ulterior Goal:

Build a startup from scratch

To achieve this mammoth task/goal,

it requires a lot of effort and dedication from each individual and with proper guidance and efforts applied in the right path any task seems to be achievable.

At first, we all might think building a startup is kind of impossible bcz we are just a bunch of 20 year olds who barely have skills, financial support and zero contacts.I had the same thought too.....

But the day I started my internship,my whole thought process changed.WHY?because I was working in a company called Jam,a startup built by bunch of friends who barely had their life figured out.I have handled the data's related to their Income since I was part of their Business Analyst team Now they do earn in millions and especially their company seems to be global at this point and where did it all start?

it all started at one of their homes and one of them(who is the CEO now) knew the field/service where they can make profits and the other one(knew the technical aspects and implemented coding and related work).

The whole point of me sharing this story is, Remove the thought which tells you "its not possible ,its not achievable ,we are bunch of kids who barely can land internships"

The following are few steps we need to follow to achieve our end goal

STEP 01:

Rewire your mindset.Remove the term "impossible" , be optimistic and start working towards the ulterior goal

STEP 02:

Research , brainstorm ideas to find the key source of income. In Simple terms,find which service we can provide to customers so that we can charge them

STEP 03:

Consistent action/effort and Time should be given by each individual, This ain't Fucking hobby and we should work on these as if our lives depend on it.

STEP 04:

Once we figure out the field in which profits are made as per our service we must expand it to a larger audience, Marketing is crucial step in latter stages of the company

If we follow these steps properly and put right efforts and work, Then I think this might be our golden ticket. Remember the Purpose is not about making money or becoming filthy rich but the thrill of building something from scratch. Remember, even big giants like IFS or WS02 must have started from scratch in small room.....

Roles and responsibilities

- Shebunan Joshwel will be **head of Data Engineering Department** and will deal all Activities related to the startup's data similar to managing databases, APIs and preparing a DataWarehouse system for the start-up.
- Risikeshan Jegatheesan will be **head of Software Engineering** (Significantly we will be building websites/platforms and provide them as a service, will discuss in detail about these with you as it has different layers of generating income) most importantly DevOps skills you have been learning will be an added advantage for the company.
- Ahmed Umar will be dealing tasks related to Software Engineering alongside with Rishi and as you seem to show interest in Cyber Security as your secondary learning career you will be **head of the Cyber Security department** of our startup
- Kaushikesh Surendran will be dealing tasks related to Software Engineering alongside with Rishi and Umar and will be the **head of Finance and HR** and you are in charge of Building contacts and Marketing strategies which is a crucial part of any start-up.

Overall Idea:

Building websites , platforms will be our main way of Income but we need to research,breakdown and try to crack a specific field where this can be translated into a monetary output.will be discussed more detail in person.....(we will be following Scrum and will be working in Sprints)
